ABOUT US **THE BEGINNING**

Bioform Ltd. is a family-owned company founded by the Öztürk family in 2005 on our 500-hectare historical estate in the Kazanlak Rose Valley. Our family began the tradition of rose cultivation and distillation with a Rosa Damascena plantation and, over time, expanded our production portfolio by incorporating the cultivation of rare and precious rose varieties such as Rosa Centifolia, Rosa Alba, and Rosa Raduga. This journey has granted us unique expertise and profound experience. This deep-rooted knowledge forms the foundation of our passion for blending traditional know-how in rose oil production with continuous innovation.

While our core activities focus on essential oil distillation and solvent extraction, we are embarking on a new investment to meet the growing demand in the sector: a modern plant drying and processing facility.

Sincerely,
Muhsin Öztürk

THE FACTORY

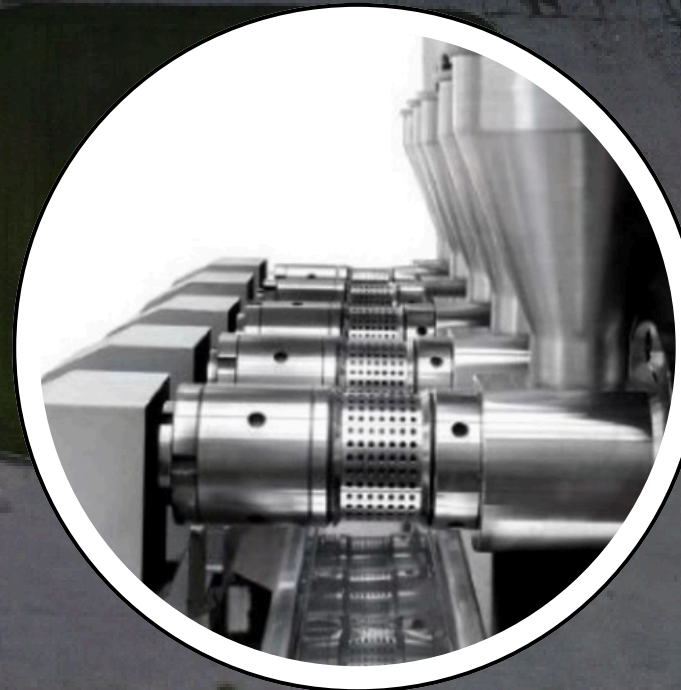

DESTILATION

EXTRACTION

COLD PRESSING

LAB

THE DESTILATION

In this production zone, we focus on the distillation of high-quality essential oils. The rose oil produced in our 20 computer-controlled distillation units is manufactured using French technology.

Equipment

Computer-controlled distillation units : 20 Pcs x 6,5 m³ = 130 m³

Computer-controlled Cohobation Column: 5 Pcs x 4000 l/hour

Storage tank for distilled product: 5 Pcs x 11 m³ = 55 m³

THE EXTRACTION

This area of our facility is dedicated to the extraction process, producing concrete, absolute, and PEA extracts. We use solvents such as n-hexane, ethanol, ethyl acetate, and water, etc., to obtain highly pure, concentrated aromatic and active compounds.

Equipment

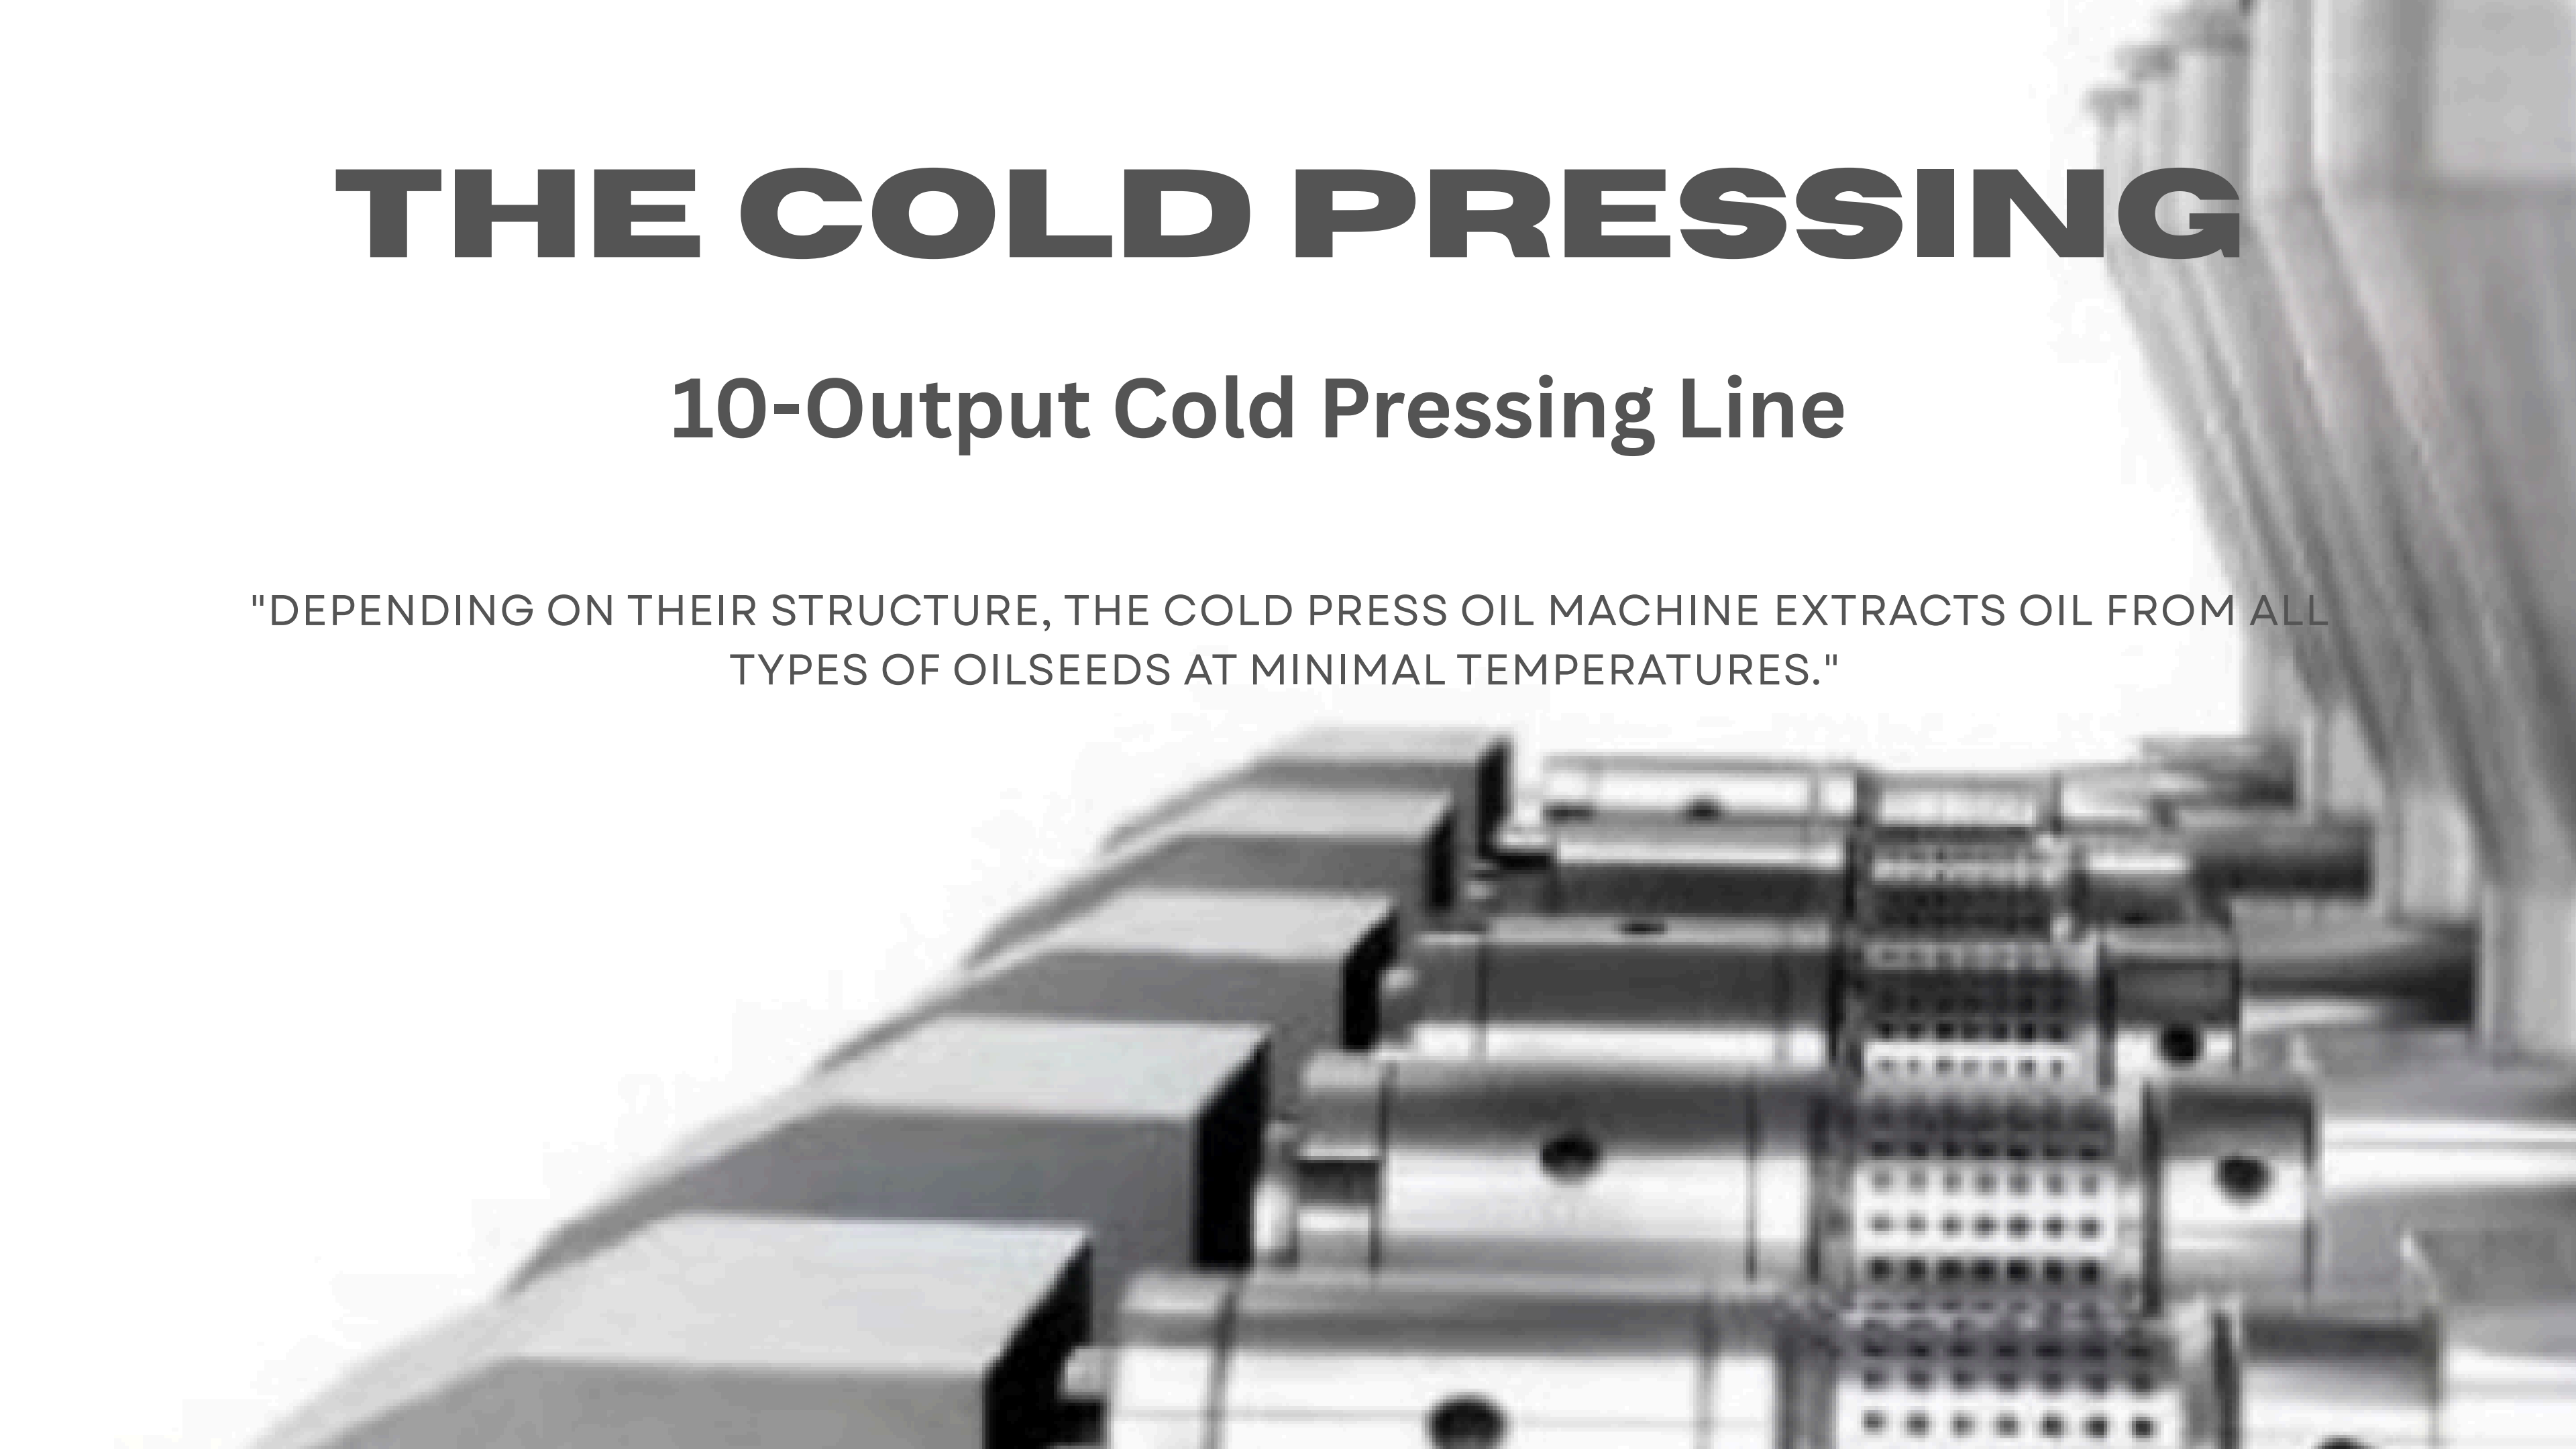

"Our facility also features a 4-line, 4,500-liter horizontal rotary solvent extraction system."

"A new 3-line, 6,500 Liter basket-type vertical solvent extraction system will be operational in 2027"

THE COLD PRESSING

10-Output Cold Pressing Line

"DEPENDING ON THEIR STRUCTURE, THE COLD PRESS OIL MACHINE EXTRACTS OIL FROM ALL TYPES OF OILSEEDS AT MINIMAL TEMPERATURES."

THE LABORATORY

Our laboratory is equipped with some of the most advanced and innovative analytical technologies in the industry. We utilize the

SHIMADZU GCMS-TQ 8040

SHIMADZU NEXIS GC-2030

SHIMADZU GC-2025

SHIMADZU NEXERA CBM-LC

SHIMADZU UV-Vis

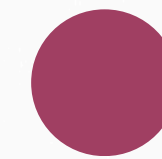

Spectrophotometer to perform in-depth analyses of essential oils, hydrosols, and a wide range of botanical extracts. These instruments allow us to conduct precise testing and verify the quality, purity, and consistency of all our products. At Bioform, continuous development is a core value. We are constantly working to optimize and modernize our laboratory to ensure it meets the highest international standards for safety, accuracy, and innovation
