DOCUMENT CONTROL

Product Specification

Version: 1.1
Issued: 29.09.2026
Applies to: Sage Floral Water
Scope: Commercial specification
Status: Approved

Indicative values. The values in this document are typical of the product, not the results of a particular batch. For batch-specific documentation and values (certificate of analysis, GC-MS report), contact us at sales@bioform.bg or +359 889 45 05 50.

DESCRIPTION

Sage floral water is the pure hydrosol produced as a co-distillate during steam distillation of Salvia officinalis leaves from Bioform's own certified organic plantations. The hydrosol captures the water-soluble aromatic and active compounds of common sage in a gentle aqueous form — the characteristic camphoraceous-herbaceous sage aroma at a concentration well-suited to direct application and cosmetic formulation.

IDENTITY AND ORIGIN

Botanical Name	Salvia officinalis L.	Appearance	Clear, colourless to very pale liquid
Common Name	Common Sage Hydrosol, Dalmatian Sage Water	Aroma Profile	Herbaceous, camphoraceous, warm sage — gentle and clean
Plant Part	Leaves	CAS Number	8022-56-8
